PROJECT EXPERIENCE

- Neutral third-party expert with binding authority retained by both parties in settlement of a dispute involving minority shareholder ownership interests in privately held manufacturing and land holding companies.
- Analyzed breach of contract claims involving a subcontractor's failure to perform involving a power line construction project.
- Determined lost profits and loss of chance in a breach of contract and gross negligence arbitration related to an incident involving a faulty process gas heater at a direct-reduced iron plant.
- Analyzed claims of fraud and breach of contract between a manufacturer and distributor of oil rig spill containment systems. Analyzed leasing terms and transactions with end customers for oil rig spill containment systems to determine distributor compliance with a dealership agreement and whether there were indicia of fraud.
- Developed a project execution plan for a large pipeline construction project. The plan included development of project controls and procedures and development of an audit plan to test project controls, procedures, and ongoing project costs.
